

תמיסות פרימיום למבחנים אימונוגניים

מוצרים נבחרים:

LowCross-Buffer

- Reduce interference in immunoassays
- Quality of detection can be significantly improved
- Nonspecific binding of the antibodies is minimized
- Reduced matrix effects

SmartBlock

- BSA-free blocker for saturating free binding sites on plastic surfaces or other protein binding surfaces
- Based on peptides which were chemically modified
- The molecules of these blockers can fill small gaps on the blocked surface
- High blocking efficiency

Liquid Plate Sealer (also available as Liquid Plate Sealer® animal-free)

- Stabilizer for coated antibodies and antigens on polystyrene- or glass-surfaces
- Plates treated with Liquid Plate Sealer® can be stored for long periods after drying
- Can be used for stabilizing coated ELISA plates, immunochromatographic test strips, affinity chromatography columns and protein arrays

HRP-Protector

- Diluent for long-term storage of HRP conjugates.
- A long-term stabilizer for horseradish peroxidase (HRP) coupled to antibodies
